

Installing, maintaining,
and improving your
lighting

Owner
General Motors

Contract Type
Lighting Retrofit

Contract Amount
25,000,000

Electrical Contractor
FSG

GENERAL MOTORS

Nationwide

FSG undertook a regional lighting retrofit project for General Motors.

CHALLENGE

Lighting is a key component of any work space, but this is especially true for manufacturers. Bright, uniform light is necessary for a safe and productive assembly line environment. GM turned to FSG to upgrade their lights in manufacturing areas around the Midwest United States.

SOLUTION

This project covered several GM plants in Michigan, Ohio, Missouri, and Indiana. FSG provided services for all phases of this undertaking, from audits and designs, to product procurement and on-site installations, for a truly turnkey approach. In all, more than 65 GM buildings were retrofitted, covering some 20 million square feet of work space. Plants in Missouri and Michigan received new T8 lamps in lieu of older HID fixtures, while the Indiana and Ohio assembly lines were upgraded to state-of-the-art LED fixtures.
