## BRISTOL MYERS SQUIBB

New Brunswick, New Jersey

Bristol Myers Squibb had been upgrading their lighting throughout their US facilities, but wanted to use a streetlight on their internal roadway that would show off the latest technologies to their employees. Nine 48W LED post-top luminaires with decorative poles were installed to replace 175W metal halide fixtures. The new fixtures not only feature lower energy consumption and longer lamp life, but are also dark sky compliant.
